

8150 To 5100 Conversion

Many of you have been asking about converting your 8150 internal Dveous card into a stand-alone Dveous. That has now been implemented and can be ordered as 8150-5100-1(component) or 8150-5100-2(composite). The conversion lists at \$33,700.00 and includes the following...

- 1) A 5100 chassis complete with power supply, motherboard, combiner board, comms board, output board (component or composite) and 2 input modules (2 DSD's modules if component or 2 analog composite modules if composite system is ordered).
- 2) A 5100 control panel.
- 3) All associated software, cables and manuals.

The client will then simply take the internal Dveous board from their 8150 and move it to the 5100 chassis. Turn on the system and you have a single twin Dveous!

Of course any 5100 options would still be available including 5100-CH2 to make system into a dual twin.
