Subject :
SHAKY EDITING & PLAYOUT OF BIG EDITS

Author: Peter Bridgman
Date: 06.03.03

If you have experienced problems when editing or playing out large edits, these problems will be greatly reduced by adding the following line to your **config.dat** file. The addition of this line will increase the resources available to large edits:

edit_cache_size 10000

To add this line, use the Windows Notepad to edit the config.dat file in folder C:\Program Files\Lightworks\Touch.

Type in the whole line together with the underscores (shift+minus sign) anywhere in the body of the file between the two "config" lines.
