ISSUE: correct way to install BorisRed4.2

Concerned platforms:

Alacrity / Softworks

Vernouillet, 18.02.2007

Issue: What options are the right one during Boris Red install process?

Wrong options will make Lightworks application unstable and RED/Alacrity collaboration hectic.

Here are the rules:

(First uninstall Boris, it comes with its own uninstall tool and reboot the machine)

On the first page enter customer information and serial number.

On the next page select only two options "**RED 4.2 Engine**" and "**RED 4.2 for Premiere Pro through version CS3**"

On the next page select all of the components

It should automatically chose a location to install Boris (C:\ProgramFiles\Boris FX, Inc) is ideal It will then go about installing all the features.

The next page will ask for the location for the plugins. Browse to and select **C:\LWPROJ\Plug-ins** (Do not add an extra folder for Boris as the files will not be recognized)

Click finish.

Thanks Matt!

Pls. send us your feel back.
